IN THE CLAIMS

Please amend the claims as follows:

- 1. (original) An electrowetting device comprising a variable element and a control system for the variable element, wherein the control system is adapted to provide an asymmetric voltage waveform to the variable element.
- 2. (original) An electrowetting device, as claimed in claim 1 having a peak voltage to effective voltage ratio of less than $2^{1/2}$.
- 3. (currently amended) An electrowetting device as claimed in claim 1 or claim 2, in which the voltage waveform supplied is substantially rectilinear.
- 4. (currently amended) An electrowetting device as claimed in any preceding claim 1, in which the control system is adapted to provide a variable pulse width and/or wave height.
- 5. (original) An electrowetting device as claimed in claim 4, in which positive and negative sections of the voltage waveform have different heights.

- 6. (currently amended) An electrowetting device as claimed in claim 4 or claim 5, in which the control system is adapted to provide positive and negative sections of the waveform having different pulse widths.
- 7. (currently amended) An electrowetting device as claimed in any preceding claim 1, in which the variable element is a variable focus lens.
- 8. (currently amended) An electrowetting device as claimed in any preceding claim 1, in which the voltage waveform has a frequency much greater than a mechanical resonance frequency of a meniscus of a conducting liquid of the variable element.
- 9. (currently amended) An electrowetting device as claimed in any preceding claim 1, in which the voltage waveform has a frequency less than the frequency above which a capacitor formed by the device is not substantially fully charged.
- 10. (currently amended) An variable lens, variable filter and/or variable diaphragm incorporating an electrowetting device as claimed in any one of claims 1 to 9claim 1.

- 11. (currently amended) An image capture device incorporating an electrowetting device as claimed in any one of claims 1 to 9 claim 1.
- 12. (currently amended) A telephone incorporating an image capture device incorporating an electrowetting device as claimed in any one of claims 1 to 9 claim 1.
- 13. (original) A method of controlling an electrowetting device comprises supplying an asymmetric voltage waveform to a variable element of the electrowetting device.
- 14. (original) A method of controlling an electrowetting device, as claimed in claim 13, in which said waveform has a peak voltage to effective voltage ratio less than $2^{1/2}$.
- 15. (currently amended) A method of controlling an electrowetting device as claimed in claim 13 or claim 14, in which the voltage waveform is a substantially rectilinear voltage waveform.
- 16. (currently amended) A method of controlling an electrowetting device as claimed in any one of claims 13 to 15 claim 13, in which the voltage waveform has a variable pulse width and/or height.

- 17. (currently amended) A method of controlling an electrowetting device as claimed in any one of claims 13 to 16claim 13, which includes varying the pulse width and/or pulse height to reduce a charging of an insulating layer of the variable element.
- 18. (original) A method of controlling an electrowetting device as claimed in claim 17, which includes determining a particular waveform having reduced charging of the insulating layer and providing that waveform to the variable focus lens.
